

COLLECTION AND RECYCLING OF EWASTE

MRI offers an Australia wide service for End of Use and End of Life (EOL) electrical and electronic technology, including an integrated remanufacture and recycling service with a diversion from landfill rate averaging 98% and we are the largest recycler of general purpose batteries and fluorescent tubes in Australia, with specially designed containers available for safe storage and transport for all sizes and volumes.

With 20 years' experience in recycling all eWaste from computers to TVs and anything that plugs in or has a battery, we have a world class environmental focus, achieve best practice recycling outcomes and maximise returns to our clients and the environment.

BATTERY TYPES:

Lead Acid (Pb)
Nickel Cadmium (NiCad)
Nickel-metal hydride
Lithium Ion
Lithium Primary Battery
Alkaline Battery

The logistical hurdles of collection, transportation, discharging, identification and sorting make battery recycling an expensive procedure. In fact, apart from lead acid batteries, little recycling is actually conducted in Australia.

MRI is EPA licensed to handle and recycle the listed types of batteries. We have developed solutions for ALDI and SITA enabling a hassle-free service to their customers.

- + eWaste Recycling
- + Product Stewardship
- + Asset Services
- + Secure Data Destruction
- + National Solutions
- + Online Reporting

ABOUT MRI

MRI is accredited for ISO14001, ISO9001 and AS4801 and we provide solutions for a wide range of material including: All IT hardware, Televisions & Monitors, Mobile Phones, Telecommunication Equipment, Circuit Boards & Cable, Printers & Photocopiers, and UPS's.

We can also provide full management and reporting for Product Stewardship and provide full or partial management of eWaste Take-back Days.

MRI can also assist you with Deployment and Asset Services. We can take care of everything from installation of brand new hardware and software, incorporating data migration from old technology to new, and the secure destruction of any sensitive data to removal and recycling of old or obsolete equipment.

PRODUCT STEWARDSHIP

MRI is compliant to Australian Standard 5377 on E waste and performs services for a range of Product Stewardship organisations under the National TV and Computer Recycling Scheme.

EXPORT PERMITS & LICENCING

MRI holds permit from the Department of Environment of the Australian Government to export batteries for recycling by approved recyclers. MRI is EPA licenced to process batteries at its Melbourne facility. MRI is actively seeking in country solutions for the recycling of a range of other battery chemistries
