

DODD & DODD GROUP PTY LTD

C D Dodd Scrap Metal Recyclers, a division of the Dodd & Dodd Group, is a full service scrap metal recycling company with more than 50 years' experience in the industry in Western Australia.

Operating from strategically located premises in Forrestfield, an eastern suburb of Perth, Kalgoorlie in the east of the State and Karratha in the Pilbara Region of the North West using our own staff, vehicles and equipment, we are the largest collector of used batteries of most chemistries in Western Australia for recycling.

We provide scheduled collection services to customers in a variety of industries throughout the greater Perth metropolitan area using purpose built vehicles. In addition to servicing the more obvious generators of used batteries such as specialist retailers, motor vehicle sales and service outlets, mechanical repairers, auto electricians, the transport industry and motor wreckers, we provide a collection service to mobility equipment, security, computer and UPS service providers, golf clubs, yacht clubs and local government recycling facilities.

We also provide a comprehensive guide on the handling, packaging and transporting of used batteries for many Parents & Citizens' Groups, Apex, Lions & Rotary Clubs, Bowling, Cricket, Football & Tennis Clubs and Special Interest Clubs in the metropolitan area of Perth, country towns and rural communities throughout Western Australia.

The recovery of used batteries, particularly from behind farm sheds, is not only a very profitable fundraising activity for local projects, but also great for the environment, with more than 60 country towns and rural communities throughout Western Australia actively involved in "battery drives."

SCRAP METAL RECYCLERS

As used batteries are considered “Hazardous” and a “Controlled Waste,” their transport and storage are regulated by legislation. Our premises and vehicles are licensed and regularly audited by the Western Australian Department of Environment Regulation and a number of our larger customers from both an environmental and OH&S perspective.

The majority of batteries recovered are exported to appropriately licensed processing facilities in South Korea under permits granted by the Australian Department of the Environment following an exhaustive assessment process to ensure exporting is the most environmentally sound and efficient management of the used batteries.

Indicative of our commitment to environmentally sound recycling, we are members of: -

- The Australian Battery Recycling Initiative (ABRI)
- The Waste Management Association of Australia (WMAA)
- The International Scrap Recycling Institute (ISRI).
